## ABOUT ME

To whom it may concern.

The moment when I consider I have cheated reality and created something it never existed in the real world, it is the best thing of doing visual effects. It is amazing having the ability to create worlds, and not only representing the reality itself, but creating our perspective of the reality and making it believable to anyone who is watching your work.

Everytime I face a problem, fills me with excitement to find or develop a solution, and I think vfx is all about solving problems, finding the best way to represent reality with CG Assets, and it is important to be sharp-eyed to focus on the smallest details.

Sincerely yours,  
Jasiel Lopez
